

Starfish Assets

All the performance metrics you need to run a tight ship

Starfish Assets allows you to wrench more value out of your existing facilities data. It contains metrics for productivity, backlog, turnaround time and customer satisfaction. It shows long-term trends and highlights exceptions, so that you can translate the information into action plans. It analyzes data from maintenance management software and merges it with data from capital construction and space management. It provides deep insights into trends over time, and highlights statistical anomalies. With it, you can examine the reliability and compliance of your Inspection, Testing and Maintenance Program.

Benchmark performance

Establish baselines with your teams. Monitor and celebrate improvements over time.

Manage exceptions

Pinpoint your outliers, identify root causes and work with your teams to resolve them.

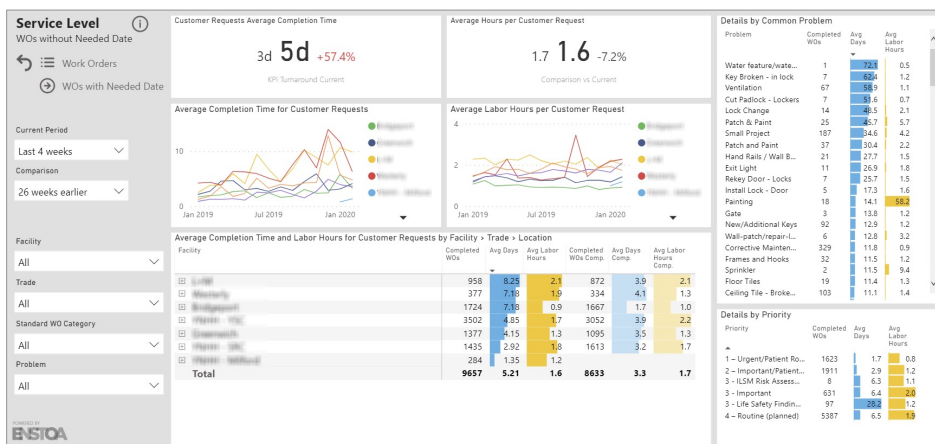

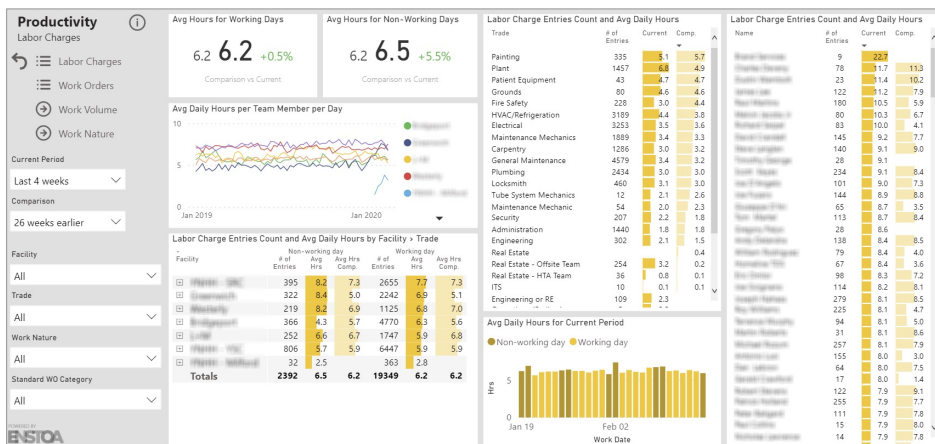

Allocate effectively

Ensure that your teams have the right priorities, so that time-sensitive priority work is done on time.

Promote compliance

Confirm your maintenance program is reliable.

Seamless workflows for editing in Revit, sharing BIM models, drawing simplification, exporting and reporting.
