

BIM Standards

Realizing BIM's potential and staying lean

By enabling you to augment the geometric data of a digital model with any sort of other data, BIM offers the potential to revolutionize how spaces and assets are conceived, managed and operated. Yet, because any BIM contributor can add any data, the potential for chaos is equally great. That's why Enstoa offers a BIM Standards service. We work with you to craft the workflows, data structures, and contributor behaviors that keep your BIM data as lean and usable as possible. Having BIM standards in your organization means BIM editing is faster, information is reliable, legacy systems are accounted for, and vendor collaboration is seamless.

Reduce unused space

Increase occupancy and lease rates by optimizing space management.

Reduce errors

Minimize errors and improve build quality.

Reduce costs

Significantly reduce building lifecycle costs.

Reduce inefficiency

Identify and capitalize on operational efficiencies.
